mezo surgery assessment

MEZO GP · BY VIDEO · ACROSS NIGERIA

Not sure you need surgery? Book a surgery assessment

Thirty minutes by video with a Mezo GP. You find out whether an operation is right for you, and if it is, you go to the surgeon ready for a quote.

> Already have a diagnosis or a scan report? You can skip this step and ask for a surgeon quote directly.

THE ASSESSMENT

₦20,000

30 minutes by video with a Mezo GP

₦15,000

for MezoCare members

If you need surgery, the fee is credited against your surgeon consult when you book it within 30 days of the assessment.

Three assessments, each for a common first question

The GP goes through your symptoms, your history and any scans you have, and tells you whether surgery is right for you now, later or not at all.

Hernia

FOR YOU IF

- A lump or swelling in the groin, at the belly button or near an old scar
- A swelling that comes and goes when you cough, lift or stand
- You have been told you may have a hernia and want to know what to do next

ON THE CALL

- Your symptoms, how long you have had them and what makes them worse
- Your health, medicines and any past operations
- Whether you need a scan, and ordering it near you
- Whether surgery is right for you now, later or not at all

Urology day case

FOR YOU IF

- A swelling in the scrotum, on one or both sides
- Veins in the scrotum, or an ache that is worse at the end of the day
- Blood in the urine, or a bladder problem a doctor said may need a camera test

ON THE CALL

- Your symptoms and how long you have had them
- Your health, medicines and any past operations
- Which tests or scans you need, ordered near you
- Whether a day case procedure is right for you, and which one

Fibroids

FOR YOU IF

- Heavy or long periods, or bleeding between periods
- A scan that showed fibroids, and you want to know the options
- A swollen or heavy belly, or pressure on your bladder
- You are planning a pregnancy and have been told you have fibroids

ON THE CALL

- Your periods, symptoms and plans for pregnancy
- Your scan report, or ordering one near you
- Blood tests for anaemia where you need them
- Whether surgery, medicine or watching and waiting suits you

Knee, hip, back or shoulder? Start with a physiotherapy assessment instead: a physiotherapist is the right first step for joints and the spine.

How it works

01

Book a time

Pick a 30-minute video slot and pay online.

02

Talk to a GP

A Mezo GP goes through your symptoms, history and any scans you have.

03

Tests near you

If you need a scan or blood test, the GP orders it close to home.

04

A clear next step

A surgeon consult and a written quote, another treatment or specialist, or no operation at all. Warning signs go straight to emergency care.

If you do need an operation

Each assessment leads to Mezo Surgery, where the price is published before you commit and agreed in writing before you are admitted. "From" is the starting price for the standard case.

ASSESSMENT	OPERATION	ALL-IN PRICE
Hernia	**Inguinal hernia repair**, one side, mesh included	FROM **₦1,100,000**
Hernia	**Umbilical hernia repair**	**₦640,000**
Hernia	**Incisional hernia repair**	Written quote after a consultation from ₦50,000
Urology day case	**Hydrocele repair**	**₦600,000**
Urology day case	**Varicocele repair**	**₦560,000**
Urology day case	**Cystoscopy**	**₦280,000**
Fibroids	**Myomectomy, fibroid removal**	FROM **₦2,500,000**

Mezo Surgery cash prices in naira, inclusive of VAT, as published on mezohealth.com, November 2026. Your HMO may cover the operation; Mezo gets the approval for you.

Questions

Who will I speak to?

A Mezo GP: a doctor registered and verified with the Medical and Dental Council of Nigeria, who works with Mezo's surgeons.

What happens to the fee if I need surgery?

It is credited against your surgeon consult when you book it within 30 days of the assessment.

Is the GP paid more if I have surgery?

No. The doctor who assesses you is paid a fixed fee by Mezo for the session. The fee is the same whatever the outcome, whether or not you have an operation.

Go to a hospital now, not a video call

- A hernia that is hard, very painful or will not go back in
- Vomiting, or you cannot pass stool or wind
- Sudden, severe pain in a testicle
- You cannot pass urine at all
- Fever with pain on one side of your back
- Very heavy bleeding, soaking a pad an hour, or feeling faint
- Severe pain in the lower belly
